

Seraphina Martin – Solar Plate and Viscosity Printing

Workshop Description:

Create a stunning portfolio of vibrant colour etchings during a two-day workshop.

Seraphina Martin will demonstrate and teach practical techniques used in solar plate etching. Using the sun and water instead of acids and solvents, solar plate etching is a quick, simple and safe alternative to traditional etching.

Transform your drawings, collages or photographs into unique state of the art prints. Many colour variations will be demonstrated and applied using the viscosity printing method.

Bring your own drawings and reference materials to create the images you will print. Alternatively, images will be available on the day, to assemble on the solar plate. Organic leaves, feathers and textures will be incorporated from the natural world.

Day 1: plate making.

Day 2: printing plates all day, with a focus on colour and viscosity printing.
